Congratulations!

You have decided to purchase a tried-and-tested TYROLIT Hydrostress unit and have thus acquired a highly sophisticated and reliable state-of-the-art device. Only genuine TYROLIT Hydrostress spare parts can guarantee quality and interchangeability. If maintenance work is neglected or carried out inexpertly, we will be unable to honour our warranty obligations. All repairs must be carried out by trained personnel only. Our after-sales service is available to help make sure your TYROLIT Hydrostress units remain in perfect working order. We hope that working with your TYROLIT unit will be a satisfying and fault-free experience.

1 Safety

These instructions are just one part of the documentation that is supplied together with the drill rig. These instructions belong together with the "Core Drill Safety Manual / System Description" to form a complete set of documentation.

DANGER
Any failure to comply with the safety instructions in the "Core Drills Safety Manual / System Description" may result in serious injury or even death.
▷ Make sure the "Core Drills Safety Manual / System Description" is read and fully understood.

DANGER
The machine starting up without warning can cause serious injury or death!
▷ Before switching on the system, make sure nobody is present in the danger areas.
▷ Switch off the system before connecting or disconnecting cables and hoses.
▷ Switch off the system and make sure it cannot be switched on again if you leave it unattended.

Serious injury or death can result if you leave the drill bit running after an accident
▷ Make sure the ON / OFF button can be reached quickly.

Risk of electric shock from live cables and connectors!
▷ Switch the drill motor off before connecting or disconnecting cables.

Risk of fire due to incorrect mains voltage!
▷ Make sure the mains voltage and frequency match the mains settings of the drill motor.
2 Description

2.1 Core drilling systems

2.1.1 It is possible to supplement the drill rig BY with suitable TYROLIT Hydrostress components to form an electric or hydraulic core drilling system.

2.1.2 Core drilling system electric

Core drilling system electric

1 Drill rig BY
2 Drill bit
3 Electric drill motor
4 Handwheel
5 Mounting plate
2.1.3 Core drilling system hydraulic

Core drilling system hydraulic

1 Hydraulic drive unit
2 Drill rig BY
3 Handwheel
4 Mounting plate
5 Drill bit
6 Hydraulic-feed mounting kit
7 2-stage feed gearbox
8 Extension arm
9 Drilling spindle
2.2 Main components

Main components

1 Adjustable foot 6 Support guide clamp
2 Chassis 7 Support
3 Guide tube 8 Handwheel*
4 Chain 9 Drive shaft
5 Brace * 10 Gearbox *

* Accessories
3 Assembly

3.1 Drill motor interface

The gear reduction arm, extensions and the ModulDrill mounting plate are connected to the support by means of bolted connections.

3.1.1 Mounting the drill motor

✓ Tool

Fork wrench

TYROLIT No. 973784 (size 19)
3.2 Interface to work surface

3.2.1 Dowel anchoring

It is possible to secure the drill rig BY to the work surface using dowel anchors.

Proceed as follows:

- Position the anchoring dowels suitable for the work surface as specified by the dowel manufacturer.
- Screw in the anchoring elements.
- Loosely secure the core drill rig.
- Set up the drill rig using a spirit level. The drill rig must be set at a 90° angle to the work surface for vertical bores.
- Attach the core drill rig securely to the work surface using the two anchoring elements.
- Check the anchoring of the core drill rig.
To secure core drill rigs, use anchoring elements suitable for the work surface. When positioning the dowels, the installation instructions of the dowel manufacturer must be followed.

Example:

Dowel instruction leaflet

3.2.2 Dowel dimensions
4 Settings

4.1 Angled position

✓ Tool

Allen key

TYROLIT No. 973792 (size 6)

Proceed as follows:

▸ Undo the bolts of the guide carriers and the support rods.
▸ Tilt the guide rods to the angle required.
▸ Tighten the guide carrier and support rod bolts.
## 5 Servicing and maintenance

### 5.1 Maintenance table

First service after 100 operating hours
Further services after every further 200 operating hours
5.2 Checking the chain tension

Checking the chain tension

Proceed as follows:

▶ Press the chain together in the middle of the drill rig using your thumb and index finger.

The chain is tensioned correctly if it can be pressed together by hand.

– The chain is too tight if it cannot be pressed together.
– The chain is too loose if it can be pressed together without resistance.

5.3 Tightening the chain

✓ Tool

Allen key  TYROLIT No. 973792 (size 6)

Tightening the chain

Proceed as follows:

▶ Undo the bolts of the guide carriers and the support rods.
▶ Tension the chain using a C-clamp and a steel plate until the correct tension has been reached.
▶ Tighten the guide carrier and support rod bolts.
5.4 Adjusting the drill rig guide

✓ Tool

Fork wrench TYROLIT No. 10995777 (size 10)

Adjusting the drill rig guide

Proceed as follows:

▶ Tighten or loosen the four nuts on each side of the drill rig.

The support must be free of play but still slide on the guide rods without needing much force.

5.5 Lubricating the chain

Lubricating the chain

Lubricate the chain with chain spray before starting work.
## Faults
