Congratulations!
You have decided to purchase a tried-and-tested TYROLIT Hydrostress unit, a highly sophisticated and reliable state-of-the-art device. Only genuine TYROLIT Hydrostress spare parts can guarantee quality and interchangeability. If maintenance work is neglected or carried out improperly, we will be unable to honour our warranty obligations. All repairs must be carried out by trained personnel only.
Our after-sales service is available to help make sure your TYROLIT Hydrostress units remain in perfect working order.
We hope that working with your TYROLIT unit will be a satisfying and fault-free experience.

1 Safety

These instructions are just one part of the documentation supplied together with the wire saw. These instructions and the “Safety Manual for Wire Saws” form a complete set of documentation.

These instructions and the “Safety Manual for Wire Saws” are a part of the equipment. They describe how to use the equipment safely and properly in all phases of operation.

- Read the instructions carefully before use, particularly the safety instructions.
- Keep the instructions for the entire service life of the equipment.
- Ensure that the instructions are available to the operator and the service engineers at all times.
- Pass the instructions on to all subsequent owners or users of the equipment.
- Update instructions with all supplements received from the manufacturer.

1.1 Symbols in these instructions

**DANGER**
Warns of danger, where failure to comply could lead to death or serious injuries.

**WARNING**
Warns of danger, where failure to comply could lead to injuries or damage to property.

**WARNING**
Warns of dangerous electrical voltage. Before working in an area identified in this way, the installation or device must be isolated from the power (voltage) and secured to prevent it being powered up again.

**INFORMATION**
Information for optimum use of equipment. Any failure to observe this information may mean that the performance information shown in the technical data cannot be guaranteed.

**RECYCLING**
Take waste for recycling.

**DISPOSAL**
Observe national and regional rules and guidelines regarding disposal.
INFORMATION
Do not allow unauthorized personnel to operate wire saw systems. Information about authorized personnel is available in the “Safety Manual for Wire Saws”.

1.2 Generally safety instructions

DANGER
Any failure to comply with the safety instructions in the “Safety Manual / System Handbook” may result in serious injury or death.
▶ Please ensure that the “Safety Manual / System Description for Wire Saws” has been read and understood in full.

DANGER
Risk of cut injury from diamond wire!
▶ Always wear protective gloves when working on the wire saw, particularly when working on the diamond wire.
▶ Only operate the wire saw with a guard.

DANGER
Risk of serious injury or material damage as a result of uncontrolled movements of the wire saw!
▶ Never connect or disconnect hoses or cables while the wire saw is running.

1.2.1 Signs on the machine

Safety sign

Unplug mains connector

Name plate

![Name plate image]

1.2.2 Personal Protective Equipment

It is mandatory for anyone working with or on core drilling systems to wear personal protective equipment.
2 Description

2.1 Wire saw system
The functions of the wire saw systems are described in the “Safety Manual / System Description for Wire Saws”.

2.2 Intended use
Transportable wire saw for use on construction sites, for cutting (reinforced) concrete, stone and masonry. Designed for industrial applications only.
Not suitable for use in potentially explosive atmospheres.

2.3 Wire saw
3 Assembly

3.1 Diamond wire storage unit
3.2 Restoring

INFORMATION
Ensure when fitting a new wire store that the wire from the last storage roller to the exit roller is properly aligned.

3.3 Mounting the diamond wire guard

DANGER
Risk of death or serious injury due to a whipping action of the wire or diamond elements flying off the wire.

- Always work with the diamond wire guard fitted.
- Always maintain the defined safety distances and working areas.
3.4 Connecting the water and power supplies

3.4.1 Connecting the power supply

Water supply

The cooling water of the saw system flows from the frequency inverter of the unit to the water distributor at the wire saw. The water is fed to cool the motor of the drive roller on the one hand, and as spray water to the diverter rollers and to supply the water lances on the other.

Water connection

<table>
<thead>
<tr>
<th></th>
<th>Min. 1.5 bar to max. 6 bar</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pressure</td>
<td>Min. 4 l/min</td>
</tr>
<tr>
<td>Temperature</td>
<td>Max. 2-25 °C</td>
</tr>
</tbody>
</table>
4 Operation

4.1 Positioning and securing the wire saw

DANGER
Due to wire saw rolling away.
Switch on the wire saw only when it is level and upright. If it is on an inclined surface, secure the wire saw to prevent it rolling away.
The wire saw must be firmly secured to the floor by means of dowels and anchor bolts.

Auxiliary item support
To ensure the wire saw is secured in position, it is possible to extend a support mounted on the side of the unit and fastened appropriately.
4.2 Correct cutting direction

**Tensioned side and slack side**

The saw cut should be made with the tensioned side (Z) of the diamond wire, because this provides the best conditions for cutting.
4.4 Overview of operating elements

1. Rotary valve compressed air (wire tension)
2. Lever valve compressed air
3. Start push-button (green)
4. EMERGENCY STOP
5. Potentiometer wire speed
6. Off push-button (red)
7. Main switch
4.5 Overview display elements

1 Compressed air gauge
2 LCD display motor current
3 LCD display wire speed
4 Hour counter
5 Motor temperature
6 Motor fault lamp
7 Lamp green (start push-button)
8 Lamp red (off push-button)
9 Max. cylinder stroke lamp
4.6 Starting the wire saw

Proceed as follows:

- Diamond wire is mounted
- The control unit is connected to the mains and the water supply.
- The wire saw is connected to the control unit.
- The compressor is connected to the control unit.
- The EMERGENCY OFF control unit is deactivated.
- The pneumatic valve is in position B.
- The pressure regulator is set to 1 bar.

- Press the start push-button (lamp lights up green).
- Now start the cutting process by slowly turning the potentiometer clockwise (position 1-2).
- Check the direction the saw wire is running while at a low wire speed. When the wire is turning in the correct direction, the wire will be drawn over the lower swivel roller.
- Once the wire is tensioned, it is possible to increase the wire speed to 20-22 m/s.
- Increase the working pressure via the pneumatic valve until the display on the main motor indicates 25-35 A.

**INFORMATION**
The machine will cut automatically when the load and wire speed have been set to an optimum. The wire is taken up in the wire store until the stroke is completed and the machine is turned off automatically via the safety switch. This safety function prevents the wire tension dropping, the wire dropping out of the rollers and the machine becoming jammed due to a lack of attention.
4.7 Diamond wire drive

Cutting speed

INFORMATION
The cutting speed must be selected according to the nature of the material.

The recommended speeds in m/sec.
Granite, aged concrete with or without reinforcement          20-25 m/s
Abrasive materials, fresh concrete, asphalt, sandstone, etc.    25-30 m/s
Maximum permitted cutting speed for TYROLIT tool             35 m/s
Feed control

**INFORMATION**
The feed cylinder pressure (wire tension) is regulated by the "rotary switch compressed air".
4.9 Transport

The wire saw and electric control unit are fitted with wheels, so they can be moved by just one person.

Crane transport

**Danger**
Risk of accidents if incorrectly transported by crane.
You must use the eyebolts provided to transport the feed unit.
Use a conventional construction crane or mobile crane to transport the unit by crane.

5.2 Troubleshooting

To guarantee fast and professional solution to the problem, it is important that you have the following information available when calling:

- Try to describe the fault as precisely as possible
- Make a note of the type and index description (refer to the name plate)
- Have the Operating Instructions close to hand

7 EC Declaration of Conformity

Description: Wire saw
Type designation: WCE18

We declare under our sole responsibility that this product complies with the following directives and standards:

Applied directive
- 2006/42/EU 17.05.2006
- 2012/19/EU 04/07/2012

Applied standards
- EN ISO 12100:2010
